Bristol Bay in the News: July 2, 2012 Fishing hound Paul Greenberg, author of "Four Fish," sends the first New York Times dispatch from a summer getaway of fishing in Bristol Bay, with Chef Barton Seaver and others. The first species to get caught on his line is the unsung Arctic grayling.

Paul writes: "Arctic grayling demand incredibly clean, cold water. And it's for this reason that they have not held their ground in the Lower 48. Once upon a time they could be found in great numbers in the northerly parts of the Western states, but municipal sewage, agricultural runoff and—perhaps above all—mining have so polluted American rivers that grayling can now be found in any numbers only in Canada and Alaska."

He addresses the Pebble Mine's threats to Bristol Bay's 35 fish species, including grayling. "Grayling are the ultimate indicator species and demand incredibly clean water. It is hard to imagine a fish this pure surviving in the face of a mine this big."

At the 11th hour, the Pebble Partnership asked the EPA to add Pebble's science data to the agency's materials that a peer review panel of scientists will consider when it provides comment on the watershed assessment.

Letter writer Charlie Charlesworth of Pennsylvania says Bristol Bay merits protection from Pebble mine. He writes: "The Environmental Protection Agency recently released a report that stated what those in the sport and commercial fishing communities already know: the Pebble Mine would cause serious harm to Bristol Bay's fish and wildlife. That's why I am joining sportsmen around the nation in calling on the EPA to use its authority to stop the Pebble Mine."

And, a fisherman originally from California laments what has been lost with salmon in the lower 48 and why he migrated north to Alaska. Gerald Masolini says it's hard to believe Pebble is even up for discussion. He writes: "And that is why I am so foaming-at-the-mouth against the proposed Pebble gold and copper mine in Western Alaska, right in the heart of the Bristol Bay fishery that produces up to 40 million red (sockeye) salmon every summer. Bristol Bay, like the goose that lays the golden eggs, is a magic gourmet grocery store that restocks its own shelves. All we have to do is take care of the store."

Chasing the Sockeye Salmon Migration

Paul Greenberg

The New York Times, Mark Bittman Blog

It seems only fitting that the first fish we catch and eat in the shadow of what could be fish-kind's worst nightmare would be one that 98 percent of Americans have never heard of (let alone eaten). *Thymallus arcticus*, known commonly as the Arctic grayling, is a member of the whitefish family (yes, that whitefish, as in smoked whitefish salad on a bagel) and is esteemed by anglers for its elegant dorsal fin...Click here to read more

Pebble Limited Partnership weighs in on peer review process for EPA mining study

AP

KTUU, Canadian Business and The Daily Journal

The group behind the Pebble Mine project wants the environmental data it's covered to be considered by a peer review panel. The panel is being convened to evaluate a draft study by the U.S. Environmental Protection Agency on the impacts of mining on the Bristol Bay region...Click here to read more

Letters to the Editor: Don't endanger huge salmon run

As the host of the television program "Fly Fishing Top 2 Bottom," I am passionate about protecting our water resources. They provide commercial and recreational opportunities for thousands of American fishermen, not to mention food for millions around the world...[Click here to read more](#)

Letters to the Editor: Bristol Bay

Michael Pschorr, Santa Fe NM

Santa Fe New Mexican

As proposed, Pebble Creek Mine in Alaska's pristine Bristol Bay Wilderness would be North America's largest open-pit mine: two miles wide, 1,700 feet deep, with a cave mine 5,000 feet under the surface, and two earthen dams, each 685 feet high -- taller than the Hoover Dam or the Washington Monument -- to hold back 10 billion tons of toxic mining waste, and planned in active earthquake and flood-prone country...[Click here to read more](#)

Northern Dynasty slams EPA report on Pebble project
